

Fort Standard

Sprue Candelabras

Gating wax is a soft extruded wax normally used to create channels or “sprues” which direct the flow of molten metal to an object being cast. The Sprue candelabra strips down the idea of casting by using the same standard wax to create the final form with the base of the design acting as a pour spout for the molten metal. The textures within the wax are translated perfectly into bronze so the castings are left intentionally raw allowing the surface to tell the story of how it was made.

Materials

Cast bronze shown
Leather bottom protects table surfaces
Available in bronze and aluminum

Specifications

Custom sizes and designs available
Holds standard tapered candles

Finish

Brown patina and sealed with wax
Different color patinas available

Lead Time

8-10 weeks

Price

\$2,000

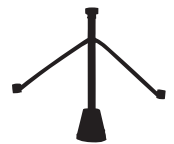

Dimensions

14 x 4 x 28"

18 x 4 x 21"

18 x 4 x 21"
